

A photograph of an underground coal mine tunnel. The scene is dimly lit, with a series of bright, rectangular overhead lights illuminating the path. On the right side of the tunnel, a long line of yellow hydraulic equipment, likely part of a conveyor system or a large-scale mining machine, extends into the distance. The equipment consists of numerous vertical yellow cylinders and horizontal metal components. To the left of the equipment, the rough, dark rock of the mine wall is visible. The floor of the tunnel is covered with a network of metal tracks or cables. The overall atmosphere is industrial and focused on heavy machinery in a confined underground space.

CORE CREW

CORE CREW

Underground Coal Operation Support

THE EFFECTIVE AND EFFICIENT PARTNER
FOR OPERATIONAL SUCCESS

corecrew.co

OUR TEAM

Our leadership team brings unmatched experience across all facets of underground coal mining. Every member combines technical expertise with hands-on leadership, ensuring operational excellence, safety, and efficiency.

Michael Nucifora, Director

With a background in senior leadership roles in top-tier mining houses, Michael drives organisational change through strategic planning, systems optimisation, and workforce alignment.

Matthew Borghero, Underground Mining Specialist

A Mining Engineer with a First-Class Managers Certificate and over 30 years of experience, Matt has held senior roles including Director and General Manager. He is a hands-on leader with deep underground mining expertise.

Adam Sheppard, Engineering & Overhaul Specialist

Adam brings over 20 years of engineering and asset management experience from Anglo American, South32, and BHP. Adam focuses on reliability, uptime, and standardised maintenance practices.

Andrew Barnfield, Safety Specialist

Andrew combines metallurgical expertise with leadership in HSE across BHP, South32, and GEMCO. Andrew ensures compliance and risk management excellence across the SHMS.

Peter Phillips, Operations Manager

Peter is an experienced operations leader with a strong track record in production optimisation, team management, and operational discipline.

WHO WE ARE

Core Crew is part of the Xenco group, which is a diversified group offering simplified solutions. At Core Crew, our team are operational leaders in the resources industry, with experience across all facets of operational and executive management.

Our approach is grounded in proven methods, offering managed solutions to the resources and mining industry to solve complex operational challenges.

WHAT WE DO

Operational Management

We implement structured systems and disciplined practices that reduce variability and drive consistent results.

Whole-of-Mine Support

We leverage decades of underground coal expertise to deliver practical support across every stage of mining operations.

Managed Services

End-to-end management of underground coal operations, driving consistency, safety, and efficiency.

Team Solutions

We deliver the right people and expertise exactly where they're needed to drive measurable outcomes.

Plant and Equipment Hire

We have a fleet of equipment ready to service your needs.

Our fleet includes air track drill rigs, tensioning and grouting units, bolters, dewatering pumps, and more. All assets are serviced and maintained through our workshop, ensuring maximum reliability, performance, and uptime when deployed to your site.

OUR SERVICES

Our **underground mining support teams** deliver reliable solutions.

We focus on solving site-specific challenges ensuring we **align and work to site specific priorities**.

SECONDARY SUPPORT

We deliver proven underground coal secondary support across major mine sites, using proprietary management tools and MOS frameworks to drive consistent performance and continuous improvement.

Our innovative air track drill rigs are engineered for safe, efficient roof bolting and installation, ensuring reliable outcomes even in the most challenging underground environments.

VENTILATION SERVICES

We deliver complete ventilation solutions for underground coal operations, covering system design, installation, and ongoing maintenance. Our services include OEM-backed solutions, in-house simulation, auditing, and Ventilation Officer support, ensuring systems remain safe and compliant.

Through **Core Crew Training (RTO)**, a registered training provider under the Xenco Group, we offer targeted ventilation programs to upskill your workforce and maintain operational standards.

CONVEYOR SYSTEMS

We provide end-to-end underground coal conveyor solutions, including installation, relocation, and maintenance of conveyor belts.

Our skilled personnel bring deep knowledge of underground conveyor systems, delivering cost-effective, time-efficient solutions tailored to the specific needs of your site, ensuring reliable material handling and minimised downtime.

SUPPLEMENTARY LABOUR

We provide operations with access to a pre-qualified pool of trades and mine technicians ready for rapid deployment across underground coal operations.

Supported by structured operational and SHMS management, our teams deliver flexible workforce solutions designed to meet fluctuating site demands while maintaining compliance and operational efficiency.

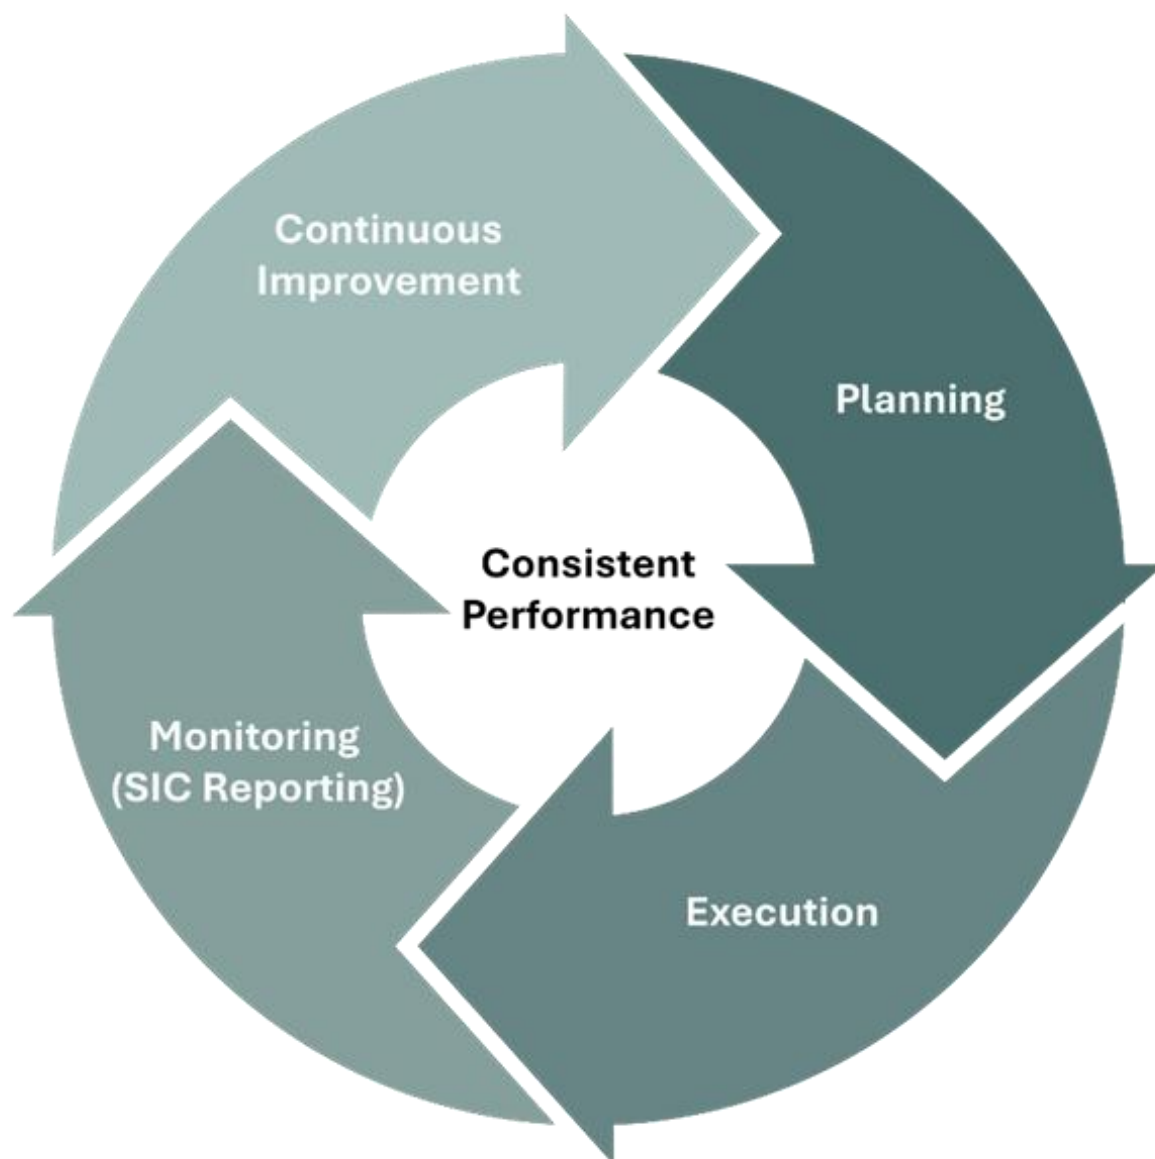

STRUCTURED FOR SUCCESS: A Value-Added Benefit of Working with Core Crew

When you engage Core Crew, you gain the added benefit of our structured approach as part of the way we work.

Our team applies proven methods and solutions to address complex underground coal challenges, supported by experienced management and a flexible delivery model.

We operate using **Management Operating Systems (MOS)** and **Short Interval Control (SIC)** reporting, which means frequent, structured check-ins and real-time progress tracking.

This framework ensures consistency, efficiency, and continuous improvement, delivering reliable outcomes for every project.
